Presentation Date: TBA

Assignment and Presentation [25 pts]: Prepare a Power Point Presentation on Convolutional Neural Networks (CNNs)

Task:

1. Research the concept of CNNs, including their architecture, functionality, and the mathematical operations involved.
2. Understand the different types of layers in CNNs, such as convolutional, pooling, and fully connected layers.
3. Learn about the different applications of CNNs, such as image and video classification, object detection, and semantic segmentation.
4. Identify and research recent advancements and state-of-the-art models in the field of CNNs.
5. **Prepare a presentation that explains the concept of CNNs, including their architecture, functionality, and the mathematical operations involved.**
6. **Highlight the various applications of CNNs and recent advancements in the field.**

Deliverable:

- A presentation on CNNs, in the form of a PowerPoint slides.
- The presentation should be well-organized and include clear and informative diagrams and images.
- You should use at least 5-6 references from reputable sources in the field.
- The presentation should be about 10 minutes long and should be prepared to be delivered in front of an audience.

How to submit:

You must add one front page that includes your name, id, course information, and submission information on your document. Save your final document as Assignment1_yourID.pdf/pptx. Now you submit the pdf/pptx file to google classroom.
